

**If you think installing EV charging points is expensive, think again.**

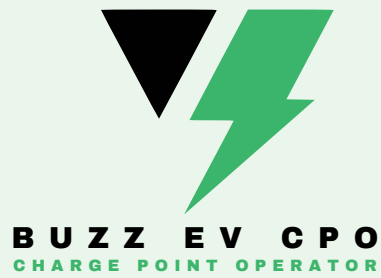

**REASONS  
TO PARTNER  
WITH BUZZ  
EV CPO**

**BUZZ EV CPO**  
CHARGE POINT OPERATOR

INSTALLING EV INFRASTRUCTURE AT

**ZERO**  
**COST**

**Buzz EV CPO** offers a unique **FREE of CHARGE** EV charging infrastructure programme, designed to help residential blocks, management companies, workplace, hotels, fleets, public car parks, sports venues service the need for **EV** drivers.

There has never been a better time to install EV chargers, as demand for charging points increases with the help of the government grant scheme and private funding.

For those who are seeking to embrace the revolution of charging EV's, **Buzz EV CPO** is ideally placed to help you get charging points installed and maintained.

## HOW THE OFFERING WORKS.

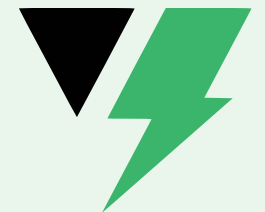

**Buzz EV CPO** has a unique financial solution to fund new installations. We access government grants on behalf of our clients and supplement those with investment from our private funding partners.

This allows us to get the infrastructure in place to you at **ZERO COST**.

We are remunerated by sharing the cost per charge with the chosen electricity service provider over the life of the charging station, which means all bays are pay-as-you-go, with no upfront costs.

We guarantee our clients will always receive great rates, ensuring the kWh charge is competitive with local on street chargers.

Working with **Buzz Ev CPO** means EV charging stations can be made available for clients with no outlay for the infrastructure of charging stations. Clients who use the EV charging points have the luxury of only paying for what they use. When the need for extra charging bays arises, we can simply add to the existing infrastructure, again for no financial outlay.

# WHY BUZZ EV CPO ARE THE BEST CHOICE TO BE YOUR EV CHARGING PARTNER

## FINANCIAL SENSE

We make the transition to electric vehicle charging easy with our unique finance solutions.

The revenue generated from the charge points can contribute significantly to the building management costs for years to come.

## A DEDICATED TEAM

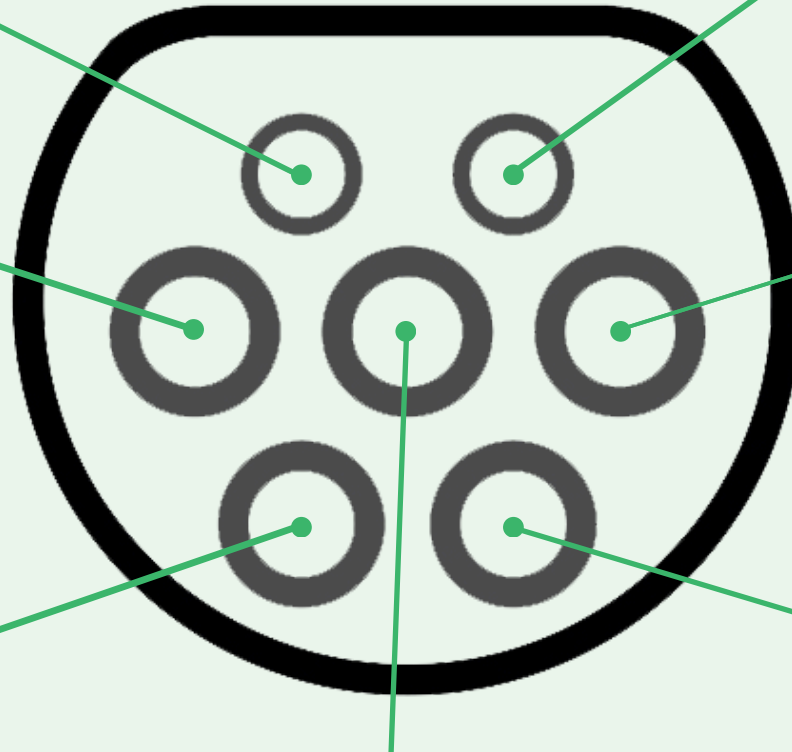

**Buzz EV CPO** has a dedicated team of skilled professionals committed to providing an exceptional service.

Our team are equipped with expertise and resource ensuring a fast, efficient solution. Onboarding is simple as we provide personalised support and guidance every step of the way.

## TRUSTED LONG TERM PARTNERS

We aim to build long term partnerships with our clients by offering unrivaled service with transparency, trust and clear communication.

Our business ensures there is no better partner when it comes to charging EV's.

## LATEST TECHNOLOGY

We always use the highest quality materials and the latest advancements in EV charge point technology.

Our clients benefit from state-of-the-art solutions that are reliable, efficient, and future-proof. Our software updates guarantee your charge points are up to date and fully equipped with the latest features.

## CUSTOMER SUPPORT

We partner with a leading charge point software company, so we can offer continuous monitoring, ensuring optimal performance and reliability.

Our dedicated engineers are knowledgeable, professional, helpful and are dispatched within 24 hours for any on-site issues.

## LEADERS IN THE FIELD

Our fully funded approach to EV charging infrastructure makes for a comprehensive solution that eliminates the financial burden for our clients.

Being pioneers in this space, no other company can match the convenience, affordability, and efficiency that we provide.

## SHARING VALUES

Partnering with **Buzz EV CPO** means sharing our core values of sustainability, innovation, and customer-centricity. We collaborate with clients to drive positive change with the use of EV's. Working together shares our commitment to environmental sustainability enabling us all to move towards a greener future.

# PUTTING YOU IN CHARGE

## THE INSTALLATION PROCESS.

**Buzz EV CPO** follows a comprehensive timeline aimed at delivering a seamless experience for our clients. A typical installation takes around eight to twelve weeks.

Once an agreement is in place, We complete a thorough site survey to determine the best position for the EV charge points and assess the feasibility of any necessary upgrades to the power supply and establish a plan.

We liaise with relevant authorities, such as the Independent Distribution Network Operator (IDNO), to obtain approval for running new power lines for the installation, if required.

Once the technical aspects are addressed, we establish the project cost and initiate the application process for private funding.

Our team assists the client in the application process for government funding.

When finance is in place, installation commences with our skilled technicians ensuring precise placement and configuration of the EV charge points.

Throughout the process, we prioritise clear communication and proactive support to address any concerns or challenges that may arise. By adhering to this tried and tested process, we ensure a hassle-free experience, empowering our clients to embrace sustainable transportation solutions with confidence.
